

A scatter plot on a white background with a black border. The plot contains numerous blue circular data points. These points are organized into two primary clusters. The first cluster is located in the upper right portion of the plot, showing a dense arrangement of points. The second cluster is located in the lower right portion, also showing a dense arrangement. There is a clear gap between these two clusters. In the bottom right corner, there is a red 'x' mark, which appears to be a reference point or a specific data point of interest. The axes are marked with tick lines but lack numerical labels.
